***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gundlach '279.

Gundlach discloses in figures 1-2 a method of making a module comprising providing a reusable substrate 1, that is light transmissive (section 0010), in a frequency range, providing a first electronic component 4, adhering the first electronic component to the substrate via adhesive 5, fabricating an interconnecting structure 3 onto the electronic component, illuminating the reusable carrier substrate with light in the frequency range after fabricating the interconnect structure and after adhering the first electronic component to ablate the adhesive to remove the module from the substrate to allow reuse of the substrate, a second electronic component (a radiation sensor), the first component can be an integrated circuit (section 0018), the substrate has alignment marks (dots). However, Gundlach doesn't disclose the second electronic component being in the form of a integrated circuit, the adhesive being bisbenzocyclobuten, spinning the adhesive onto the substrate, the substrate being made of glass, quartz, fuse silica, fabricating the interconnecting structure from a dielectric and a conductor in the form of polyimide. It would have been obvious to one having ordinary skill in the art at the time that the invention was made that the adhesive could be

bisbenzocyclobuten and applied through spinning, the substrate could be fabricated of glass, quartz or fuse silica, and the interconnect structure could be a dielectric and a conductor in the form of polyimide because these materials are old and well known in the art. Also using these materials don't provide any novelty over the prior art.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chung discloses a cover and optical device.
